Summary

Software Engineer with nearly a year of hands-on AI engineering experience, specializing in cloud-native multi-agent systems on AWS Bedrock AgentCore and Langgraph. Proficient in TypeScript, Node.js, Python, and Terraform, with a strong foundation in Java, JavaScript, and full-stack development. Passionate about building intelligent, production-grade AI systems that create meaningful user experiences at scale.

Technical Skills

Front End| Javascript, Angular, React, CSS, HTML **Back End**| Java, C, PostgreSQL, MySQL, Python

Education

University of Texas at San Antonio / B.S. Computer Science - Software Engineering

Graduated: August 2025 | GPA: 3.5

Professional Experience

Fasttrack Engineer / University of Phoenix

June 2025 - Present | Phoenix, AZ (remote)

Multi-Agent AI Platform

- Built sub-agents on Amazon Web Services Bedrock AgentCore, combining ECS Fargate scraping pipelines and strict retrieval-based Q&A to maintain fresh knowledge base content and deterministic support responses
- Designed and implemented registry-driven multi-agent routing using Bedrock AgentCore Registry, eliminating hardcoded ARNs and enabling automatic agent discovery and onboarding
- Developed registry-driven dynamic routing for a multi-agent AI platform using Bedrock AgentCore Registry, eliminating hardcoded ARNs and enabling automatic discovery and onboarding of newly registered agents

Infrastructure as Code & CI/CD

- Containerized and deployed TypeScript web scraper as ECS Fargate task triggered via AppSync and EventBridge, persisting data to S3 and triggering automated Bedrock Knowledge Base sync workflows
- Built Lambda-based ingestion pipeline for scheduled Bedrock Knowledge Base updates with observability, SNS alerting, and CloudWatch monitoring
- Extended Terraform infrastructure modules and CI/CD pipelines (Spacelift + GitHub Actions), improving deployment automation and consistency across services

Observability, Security & UX

- Implemented LangSmith tracing, prompt management, and automated Guardrails compliance alerting workflows, improving observability and enabling UI-driven prompt iteration without deployments
- Integrated Ping Identity session validation controls to enforce per-user session isolation across chat experiences
- Built cross-tab chat synchronization using Broadcast Channel API, ensuring consistent state across sessions and browser tabs
- Implemented Module Federation architecture and migrated UI to Styled Components with Phoenix Nest design system for scalable micro-frontend delivery
- Resolved critical frontend issues across session persistence, layout responsiveness, personalization rendering, and dynamic link behavior

Full Stack Engineer / Cook Systems

September - October 2024 | Memphis, TN (remote)

- Engineered full-stack web applications using Angular, Spring Boot, and PostgreSQL, building scalable services with RESTful APIs and structured relational data models
- Architected backend systems for a social platform, implementing authentication, social graph features (follow/like/mention), and 30+ API endpoints using Spring Boot and JPA
- Developed secure, role-based access control mechanisms using JWT, enabling differentiated permissions across users, teams, and project workflows
- Built and delivered multiple production-style applications, including a collaborative dashboard system and API-integrated interactive tools, while working in Agile teams with CI/CD pipelines, code reviews, and Git-based development workflows

Cashier / HEB

January 2020 – June 2025 | San Antonio, TX

- Troubleshoot and resolved technical issues with the POS system during freezes ensuring smooth operations
 - Processed credit and cash transactions accurately and efficiently using point-of-sale (POS) systems
 - Ensured customer satisfaction by resolving customer concerns and complaints with empathy and professionalism
-

Projects

External Scholarship Agent

- Developed user-related CRUD functionalities and integrated business logic for following, liking, and tweeting
- Ensured efficient interactions between user, hashtag and tweet entity by adhering to design and implementation
- Ensured best practices for scalability and maintainability through API testing and debugging using postman

Environment: *Java, postgresql, spring boot, lombok, JPA, Maven, SQL*

DinoBEATS

- Collaborated with team members to create a rhythm-based, dino-themed game
- Designed a responsive and user-friendly interface, ensuring accessibility across multiple devices and screen sizes
- Implemented event creation, editing, and deletion functionality, improving user engagement and usability

Environment: *Java, LibGDX, MongoDB Atlas, Node.js, Express*

RESTful social media API

- Developed user-related CRUD functionalities and integrated business logic for following, liking, and tweeting
- Ensured efficient interactions between user, hashtag and tweet entity by adhering to design and implementation
- Ensured best practices for scalability and maintainability through API testing and debugging using postman

Environment: *Java, postgresql, spring boot, lombok, JPA, Maven, SQL*
